

Annex C eSIM Certification Applicability (Normative)

This Annex identifies the current requirements and specification versions for Consumer and IoT eSIM compliance declarations, and includes:

- Security requirements,
- Functional requirements, including means of test.
- Currently recognised exemptions from compliance.

Organisations either planning SGP.24 compliance activities or interested in the current status of compliance requirements are recommended to reference this table when planning product compliance.

Products declared compliant (i.e., using a PRD version active at the time of declaration) remain compliant even when the PRD version has reached its expiry date.

A Product declaration may be updated, still indicating the same PRD version or a more recent minor version, even if that version has reached its expiry date.

NOTE: An active SGP.31/32 PRD version can refer to an inactive SGP.21/22 PRD.

Table C.1 eSIM Certification Applicability
